

new website helps car buyers zap the dealer and save money buying their car

simply enter payment amount and number of payments to see the interest rate - is it reasonable?

Denver CO -- January 30, 2008 -- DealerZapper.Com allows the user to enter the monthly payment amount and the number of payments proposed by the dealer to learn whether it is a good deal or not.

Many times, a consumer visits the car dealer, and while they are negotiating the price of the car, the dealer will quote the price in a monthly payment and number of payments.

This method is very dealer and lender friendly because the dealer is able to hide the proposed interest rate, which if accepted by the consumer can earn the dealer or lender more money on the sale.

Now, the consumer can visit dealerzapper.com using their cell phone, right from the car dealership and enter the monthly payment and number of payments. Then the consumer looks for the price of the car in the list, and when he finds it, can then look at the interest rate. This is the rate the consumer will be charged if he accepts the deal proposed by the dealer.

DealerZapper.Com allows the consumer the opportunity to determine if the loan they are being offered contains a reasonable interest rate, or if the interest rate is excessive.
