Acetaminophen is a pain reliever and fever reducer.

Butalbital is in a group of drugs called barbiturates. It relaxes muscle contractions involved in a tension headache.

Caffeine is a central nervous system stimulant. It relaxes muscle contractions in blood vessels to improve blood flow. Fioricet is a combination of acetaminophen, butalbital, and caffeine.

Fioricet is used to treat tension headaches that are caused by muscle contractions.

Fioricet may also be used for other purposes not listed in this medication guide.
