Millions of people have anxiety disorders, like panic and social anxiety disorders, and depression. And there are millions of women who suffer from premenstrual dysphoric disorder (PMDD). Too many of them are still waiting to feel relief.

What do they have in common? Paxil CR may be right for them. There is help available.

Scientific evidence suggests that depression and certain anxiety disorders may be caused by a chemical imbalance in the brain.

Paxil CR helps balance your brain's chemistry. (See Important Safety Information about Paxil CR.)

Just as a cake recipe requires you to use flour, sugar, and baking powder in the right amounts, your brain needs a fine chemical balance in order to perform at its best.

Normally, a chemical neurotransmitter in your brain, called serotonin, helps send messages from one brain cell to another. This is how the cells in your brain communicate.

Serotonin works to keep the messages moving smoothly. However, if serotonin levels become unbalanced, communication may become disrupted and lead to depression, anxiety, and PMDD.

Paxil CR helps maintain a balance of serotonin levels, which may help cell-to-cell communication return to normal. Paxil CR is with you throughout the day to help you manage and treat your condition.
