

# Alternative to Fuel Car

*Shocking-New Water for Fuel conversion system. The oil companies probably don't want you to know.  
Run your car on water and possibly Double your Gas Mileage, boost power and better your emissions.*

We are all sick and tired of paying these unbelievable gas prices. The way things are going they will only increase. This is leading many people to research for an [b]alternative fueled car[/b]. Which is how I found a popular new conversion to use water for fuel to run your car/truck.

[b]Run Your Car on Water[/b] which it is commonly known as, gives us a alternative method of running our vehicles and is currently catching on very quickly all over the world. The U.S. isn't the only place with high gas prices.

A [b]water powered car[/b] actually was discovered in the mid 1900's and was being tested and tweaked for actual use. The first water for fuel car finally was revealed captured on camera in the mid 1990's by a man named Stanley Meyer. He was soon later killed by food poisoning while eating at a restaurant. Many people have taken this water power concept and have been updating their own ideas and patenting their own versions of an alternative fuel car. Now currently in the 21st century they have been working to perfect this concept even further and have finally succeeded.

How does the [b]Water for Fuel[/b] system work?

This water car conversion works by actually running with a little water which creates hydrogen from a little electricity. Hydrogen is Much more powerful than just fuel and also is clean burning. Have you seen the commercials for the new Hydrogen Celled Cars coming out this year? They release water vapor into the atmosphere. The vehicle will also use fuel but will use less to power the car.

Results expected after the [b]hydrogen car conversion[/b] is installed in your own vehicles is definitely worth the little time and effort it takes. You will get at least %40 or better fuel economy, many have doubled their gas mileage. Boost the cars power by at least %20 and your emissions will be better as well. Hydrogen releases water and your car uses less fuel which results in less harmful exhaust released into the atmosphere.

I saw prices for the d.i.y. conversion manuals starting at only \$40 to a couple hundred dollars. Most of them come with guarantees and tech. support. If you want to learn all the details for this [b]alternative to fuel your car[/b] then I recommend checkingout this website [www.runcaronwaterreview.com](http://www.runcaronwaterreview.com) just click on the link below or on the right hand side. I didn't explain everything to well but you can see all the details, diagrams, videos about the water for fuel system and what sites have the best up to date conversion manuals and which one's don't.
