

Dynamic Wireframes are more efficient than Static Wireframes

Dynamic Wireframes, commonly known as rapid or interactive wireframes have vast benefits compared to static wireframes.

Dynamic Wireframes are a very important aspect or idea of any application or website. Since many applications are developed on web-based technologies these days, Dynamic Wireframes and User Interface (UI) play a major factor among numerous websites that are similar. UI design architecture include various aspects of websites/applications such as navigations, buttons, graphics components, information placement, icons and color combinations all of which can be captured with dynamic wireframes prior to the actual coding of the project.

Do you want to design a new website or new application or product or add a new feature to a current website/application/product? Do you want to see complete website/application how it will work before committing development time and cost to it? Wireframes are screen-by-screen blueprints that visualize the design and a webpage wireframe is a similar illustration of the layout of fundamental elements in the interface. Prototypes simulate how a product or feature will work without coding. Both offer a great way to visualize the product and gather early user feedback to improve design before launching. And they are perfect for communicating requirements to the development team.

Starbiztech.com has helped many clients to plan design and develop dynamic wireframes and prototypes. We are in the business of Web/UI/Graphics/SEO for Fortune 500 companies for the past 15 years. We have designed and developed dynamic wireframes/UI/Web Design and Development/Search Engine Optimization and came across many companies who use dynamic wireframes that are more efficient and will give a lot of difference with respect to their project cost, time and decisions. Many of our clients praised us to see the live wireframe application with error reporting, prototype and specification documentation.

Wireframes can be created in many ways with several tools depending upon one's communication needs and budget. Most simply, pen and paper are key tools for creating web wireframes, but that will not give the clear idea of the final website. There are also interactive tools available for use by designers, programmers, and project managers, as well as programs that even allow collaboration with clients prior to the website programming stage. These tools include: Adobe Illustrator, Microsoft Visio, OmniGraffle, Axure RP and iRise, as well as online solutions such as Iplotz and ProtoShare. These programs allow for a clean presentation of a website's wire framing and in some cases, most of thie tools can be used to create static wireframes but we have used Axure Rp extensively to create fast and dynamic wireframes. Axure RP enable the application designers to create interactive wireframes, flow diagrams, prototypes, and specifications documentation for applications and web sites faster and much easier than creating static mockups with their current tools.

Benefits of Dynamic Wireframes Vs Static Wireframes-

1-Dynamic Wireframes are more efficient and user friendly navigation.

2-Clear final visuals to guide product discussions, gain stakeholder buy-ins, and arrive at final product decisions.

3-Dynamic Wireframes will give you the actual final product overview and navigation

4-It will improve the design quality with
Respect to time and cost of the projects.

5-Engage Stakeholders, Developers, Business Analyst, Quality Analyst, Usability Experts, Product Managers and Business people to gather valuable feedback and fine tune any application of website before beginning the actual coding.

6- Important guidance for graphic designers/Front End Designers who create the product "look and feel."

7-Solid annotation and specification documentation to help developers implement the design correctly and efficiently.

8-Compare Dynamic Wireframes vs. Static Wireframe.

For more info on Dynamic Wireframes, Interactive Prototypes, SEO Packages, Cheap Web Design Packages, please check Starbiztech.com or send an email to info@starbiztech.com.

Starbiztech.com is the leading Dynamic Wireframes/UI/SEO/Web Design and Development Company who mainly focuses on the clients needs and they have 15 plus years of experience and they have worked for major clients in USA and India.

Good news ***** Due to economy situations, Starbiztech is giving away \$5000 worth free Ads and services for all new customers.
