

# ABOUT THE MICHI HEALTH EPICENTER... A VISION FOR HOPE. POWERED BY LOVE.

*The EpiCenter emerged out of the despairing cry of a mother's hope for her son. Without funding, Dr. Alale, a Health Physicist, recruited a team of volunteers to screen people for EMF poisoning risks.*

The MiChi Health EpiCenter of MiChi University (MU) at University Central | Cincinnati, OH is a non-profit, 501 ( c ) ( 3 ) pending corporation which is chartered in the state of OHIO. MU is a registered with Dun and Bradstreet as a small business agency offering services in research, education and wellness programs specific to environmental health management for government, private, and public enterprises.

The EpiCenter emerged out of the despairing cry of a mother's hope for her son. She moved her family from Washington, DC to Ohio and unknowingly brought a home that built on nuclear waste and full of radiation toxins. It made her son, Prince Kahlif, lose over 60% of his brain theta wave and altered his behavior so that he was stuck in manic aggression and rage. He had to be hospitalized for almost a year. She too suffered from chest pain, rapid heart rate, breast tumors, sleep apnea, insomnia, gastric reflux, lymph edema, and alterations of the alpha brain wave. It was the compassion of a Russian Doctor that she met at a medical conference in Canada who was merciful to speak to her about being toxic with electromagnetic radiation and ask her "if she had ants" in her home? She replied, "Yes, an ant infestation in fact!" The doctor then offered to give her an evaluation for EMF (electromagnetic frequency) radiation poisoning. She accepted it. The findings confirmed her observations. Dr. Rhoda Zion Alale was indeed sick with EMF radiation poisoning. The doctor then advised her to get an engineer to evaluate her home. Those findings revealed that the home was full of converging ionizing, non-ionizing radiation and industrial chemicals.

Without funding, Dr. Alale, a Nurse Scientist (for 30 years), studied environmental toxins and became a Board Certified Health Physicist. She began The MiChi Health EpiCenter of MU and recruited a team of dedicated medical professionals, engineers, paraprofessionals and volunteers (many disabled) who also suffered greatly from environment toxins and radiation to begin research, product evaluations, and training curriculums to enhance the skills of healthcare practitioners in screening for EMF radiation poisoning. Together, they now span the global community and have over 130 years of combined education and clinical experiences in bio medical-engineering, health physics, allopathic and naturopathic care. They also share a passion to collaborate with other agencies and businesses to develop care regimens for early screening and precise care delivery systems that can impact public health education, reduce environmental poisons, prevent disease and preserve the sanctity of a healthy toxin FREE life. Dr. Rhoda Zion Alale, now a Diplomate of Health Physics, measures and analysis, ionizing and non-ionizing radiation, greenhouse gas, particular matter, and industrial chemicals and their impact on cell function and health.

At a luncheon with Vice President Dick Cheney, on Capitol Hill, she shared her horrific encounter with death from environmental toxins and quest to save her families and the families of America. For her heroic efforts she was inducted as a Presidential Commissioner for the US House of Representatives | NRCC and named in the Wall Street Journal as a 2008 Recipient of the Congressional Order of Merit Award. She developed the first public health screening model for EMF radiation poisoning in the nation. Now, she directs the mission of MU to support the EPA C.A.R.E. initiative to lower air and radiation toxins in homes and buildings as well as those of the National Environmental Health Foundation of the US Congress. MU is positioned also to support HOUSE BILL 159 in the Ohio Legislation for Universal Healthcare for the residents to respond to the masses who are allegedly suffering from EMF radiation poisoning and Multiple Chemical Sensitivities. USA TODAY has named all Ohio schools in the "TOXIC AIR IN AMERICA'S SCHOOLS REPORT." "Every school, home, prison, and office in Ohio needs to be mitigated from both industrial chemicals toxins and radiation. Children are suffering from emotional, lymphatic, neuromuscular, and psychological disorders here, in Ohio, like nothing that I have ever seen in my 32 years of nursing in 4 countries and 21 cities across America."...said, Dr. Alale.

She is a member of the Phi Delta Kappa Honor Society (Columbia University " NYC ) and is celebrated as a Visionary for World Health by her colleagues of the Women's Fellowship Program at the John D. Rockefeller International House (NYC) in collaboration with the United Nations. She is also named in the 100 Most Extraordinary Nurses in America by Sigma Theta Tau Nursing Honor Society (Gamma Beta Chapter " Howard University, Washington, D.C.). For her dedication and proficiency, as a Nurse Consulting on the Opening Team of King Fahad Hospital of Riyadh, Saudi Arabia for the Royal Family and the Royal National Guard and the appointment as the Private Nurse of the King's daughter's handmaiden, she received a Letter of Commendation for Excellence in Service. Five US Presidents have honored her work. They are respectively, Ronald Reagan, George Bush, Sr., Bill Clinton, and George Bush, Jr. President Bill Clinton who also convened the adoption of her youngest son, Prince Kahlil, in the White House.

Representatives from President Obama's Administration visited her home, now the Greenspace Living Laboratory, just north of Cincinnati, OH, to see the high levels of radiation and technologies to mitigate it. They inspired her to pen the National Petition 101 | Mitigate America. (please sign at [www.michihealth.org](http://www.michihealth.org)) The President then invited her to participate in a Town Meeting "on-line" by voicing a question to him. She was allowed 30 seconds so she asked him about his support of HOUSE BILL 159 to prevent the masses in Ohio from being poisoned as referenced in the New York Times article naming "Ohio, as a Mini-Hiroshima." She is an Ijoian Princess and the wife of the late Prince Charles Robinson Alale of Warri, (Agbere) Nigerian West Africa and the mother of two sons, Prince Kahlif and Prince Kahlil and one granddaughter, Princess Kaleyah Amori.

TV Producer, J.D. Carson of Urban Streets TV of Houston TX, contacted Dr. Alale to do a multi-series segment on "GREEN THE BLOCK! POWER UP YOUR HEALTH FIRST CAMPAIGN" to promote environmental health and safety amidst promoting the green jobs campaign by the 700,000 member organization, the HIP HOP Caucus, and others across America.

In remembering, the King of Pop, Michael Jackson, the intent of the series is to stop the health disparities of sleep apnea, insomnia, anxiety, nose bleeds, headaches, aggression, depression, cancers, fibromyalgia, sustained back pains, stiffman syndrome, cancer, etc that

now plagues musicians who spend endless hours working in studios with digital equipment, wireless mics or connectivity and on cell phones as well as pastors and musicians in the church.

"We have lost a mother's son and a world hero, Michael, on the eve of "electromagnetic hypersensitivity" or EHS emerging from the World Health Organization as a new medical diagnosis; the National Institutes of Health researchers associating EMF poisoning with insomnia, and a Class Action Suit forging against all Blue Tooth manufacturers (PEOPLE MAGAZINE, April 13, 2009, pg 82) for emitting toxic radiation that causes hearing loss...• said Dr. Alale. "Because Michael suffered with insomnia, we owe it to his memory to explore the health physics dynamics of his environment and advise others to get tested for EMF radiation poisoning and test their equipment and studios as well, especially if they have a sleeping disorder. It troubles me, as a health provider, that his cry for help and relief from insomnia, maybe heard louder in his death than in his life. As a mother who lost her son for two years from brain injury from EMF radiation poisoning, I reach out to others. Listen to your children! Their insomnia, aggression, and hyper-anxieties maybe coming from radiation or environmental poisonings.". . . she continued. Dr. Alale volunteered postmortem radiation forensics for Michael's autopsy to the LAPD and Jackson family.
