

When You Want It, Where You Need It, Ultimate Portable AC / DC Security Alarm

Vehicle rentals and leasing consumers protect vehicle and motel room with one unit. Neoprene tote bag makes it easy to transport. Requires no installation. Just plug into cigarette lighter and arm.

August 16, 2009

Tap the glass on your vehicle and wait a few seconds. If the vehicles horn or a siren does not go off, you do not have a sufficient vehicle security alarm. You might have a factory installed security alarm that will prevent your car from being driven away but nothing to protect the contents. What can you do to provide better protection?

Install a after market alarm. This offers better protection over the factory security system for sure. But what if you are leasing or just renting the vehicle for a business trip. Should you worry about samples or your laptop in the rental car being stolen?

Steal Armor which manufactures Portable Alarms has just released a new Travel Companion Security Alarm. We call it ARMORGUARD. This one of a kind portable security alarm offers rental customers and leased vehicle operators a way to protect the valuables in the car. Measuring only 8in long by 4in in diameter, this little alarm provides interior protection. On board glass breakage sensor and a killer RF interior sensor. If the thief attempts to enter the vehicle, the violation will be announced with the 120db built in siren. Set it on the seat or lay ARMORGUARD on the floor. Cigarette lighter hook up gives you the advantage to move from vehicle to vehicle. Provides security when you need it and where you need it. Providing protection while you are traveling. Once you reach your destination, move your valuables into the motel room. Use ARMORGUARD to protect your valuables there as well. Use the remote to set the alarm behind the door when you leave the room. Disarm it when you return. ARMORGUARD will notify you if anyone entered the room while you were away. The ultimate portable security alarm. Comes with all the necessary accessories for 12 volt and 110 volt applications. "This is a perfect addition to our line of portable security alarms", states Steal Armors' CEO. "From the design to the application we provide security to the special use consumer". Common sense products for unique applications.
